# Supplementary material for PhysINR-Zero: zero-shot underwater image enhancement with physics-constrained coordinate fields, evaluated under a leakage-guarded re-benchmarking protocol

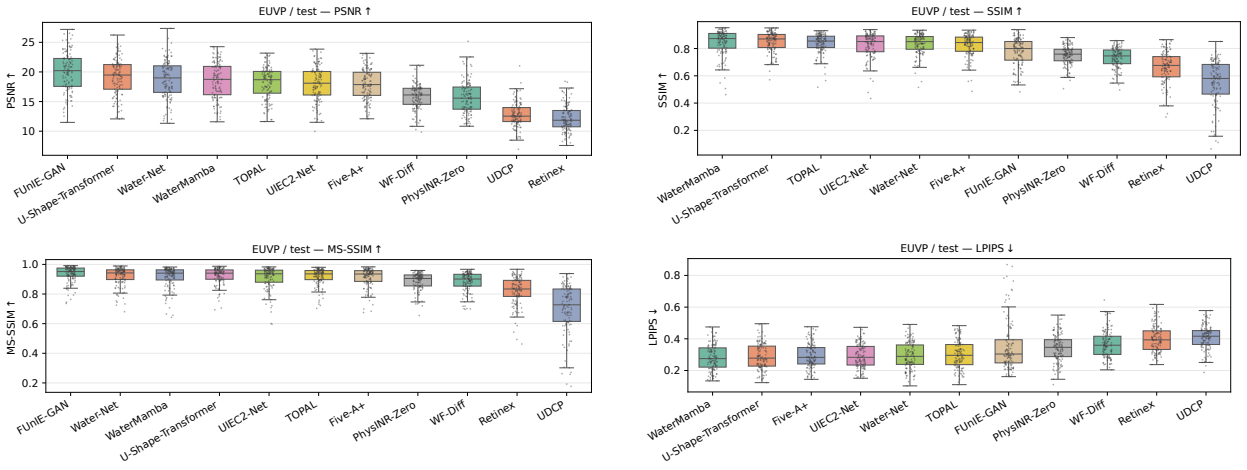

This document contains figures that visualise data reported in full in the main text's tables: the meta-training convergence curve, the LSUI and EUVP score distributions, and the per-set radar charts. They are referenced from the main text as Figs. S1–S4. All plots are vector PDF; raster TIFF siblings ship in the source package.

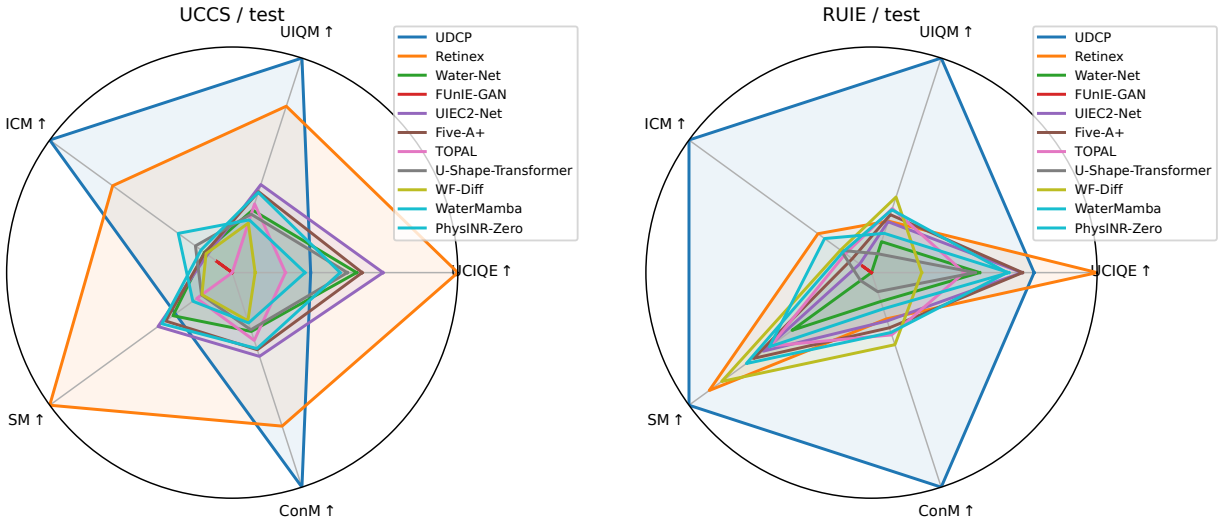

**S1** Meta-training curve: outer loss over the 4,000-task run (held-out synthetic tasks).

**S2** LSUI score distributions for all eleven methods (PSNR, SSIM, MS-SSIM, LPIPS-AlexNet).

**S3** EUVP score distributions for all eleven methods (PSNR, SSIM, MS-SSIM, LPIPS-AlexNet).

**S4** No-reference profiles (UCIQE, UIQM, UICM, UISM, UIConM) on UCCS and RUIE.
